## Instructions

- Overview Video: <https://youtu.be/xIS-nqFfink>
1. Ensure you've followed the lessons to set up your GitHub, git, and VS Code
  2. Fill in the below tasks (note: it'll save as you go)
  3. Once everything is filled in, ensure you click "Submit and Export PDF"
  4. Upload the PDF to GitHub in a Module1 folder
  5. Find the downloaded PDF and move it into the location of your local repository folder (don't use the Github upload option as we want to practice the git commands)
  6. Use `git add .` to track all file changes (i.e., the PDF)
  7. Use `git commit -m "Uploading M1 PDF"` to record the change and provide a meaningful message
  8. Use `git push origin main` to move the changes to the remote repository's main branch (Note: Future assignments will have a dedicated branch name for their work)
  9. Take the same PDF and upload it to the Canvas submission

Progress: 100%

### Details:

- Did you have any issues/problems this module? If so, what were they and how did you solve them?
- Did you learn anything new this module? If so, provide some brief details.
- If both answers were no, briefly explain your prior background.

### Limits:

### Your Response:

Did you have any issues/problems with this module? If so, what were they, and how did you solve them?

I had an issue downloading Java, but I found one that worked on my computer. Other than that, everything went well.

Did you learn anything new in this module? If so, provide some brief details.

I learned about waketime and its uses, and it's cool because it will be helpful in future projects that I do.

If both answers were no, briefly explain your prior background.

I have a background in everything we are using and doing in this class, I just found some extensions that I didn't know of. I have used GitHub and VS Code extensively and I have coded in Java a few times, so I understand what I'm doing.
